### D.R. Joseph Showing New Features of Machine Directional Sealing System at Pack Expo 2021

The D.R. Joseph team is excited to exhibit once again at Pack Expo 2021, where they will be exhibiting the *DRJ Seal-Cut*; machine directional sealing unit designed for high quality sealing applications. Look for DRJ at Booth SU-7614.

For those not familiar with the Seal-Cut, DRJ has developed an innovative solution for customers who require the strongest machine direction seal without sacrificing clean seal edges. Straying from high sealing temperatures (as with a hot knife) which crystalize and weaken the film, the Seal-Cut provides longer blade dwell time and lower sealing temperatures to gently and completely seal film in a more controlled manner, allowing the film to maintain its elasticity and strength after sealing.

Longer blade dwell time means that it is not a problem to seal films as thick as 6 mil and do so without buildup on the seal edge, while line speeds up to 1000 feet per minute are possible.

#### New Capabilities and New Features

DRJ is pleased to announce that the Seal-Cut is now shipping with 6" color touch screen controls, enabling advanced features that save time and improve reliability.

New features include a one touch cleaning feature, fool-proof temperature calibration and password protected max temperature settings, helping to ensure that SOPs are followed for a given production run. Improved on-screen troubleshooting aids help minimize downtime.

Users can now also select °F or °C for all display screens on the Seal-Cut.

The team at DRJ looks forward to discussing how the Seal-Cut and its new features can work for your specific applications. Please stop by **the DRJ booth SU-7614** to learn more.
